Untrustworthy E-mails

How e-mails can have devastating impact on a human life. A simple article about this theme and some examples. We want to train the user so he can recognize these sketchy e mails easily.

App-Part

The program is a scam bot which inpersonates Donald Trump.

It goes like:

He is asking mexicans to donate money for the wall on the border of Mexico. His reasoning is that America has great debts and the user should donate money, so the wall can be built. The bot trys to make the user feel guilty.

The user later has the option to write an answer inside the e-mail simulation and the algorithm decides through keywords what to respond to the user input.

If the user really tries to put valuable informatinon in the simulation, the simulation will be stopped. It then asks the user if he really wants to send this e-mail.
